

Shivani Brijmohan

Full-stack Engineer

Technical Projects

352.573.9399 || shivani.brijmohan@gmail.com

Full stack web developer with a passion for action. After traveling for some time during my travels I taught myself web development to help nonprofit organizations spread their message. I have a keen eye for user experiences and digital storytelling. I'm a firm believer that you're doing it right when you're committed to helping others while providing value to your clients and customers.

Bounce [Bounce Demo](#) || [Bounce Github](#)

Bounce is a music streaming application that allows a user to browse and create music. Built with a Ruby on Rails backend to authorize user, as well as action cable so the users can see what other users are listening to. Built frontend using React to responsively update components. Bounce fetches data from the Napster API. Custom styling with css and integrated Semantic UI.

InnerMost [InnerMost Github](#)

Provide insight into a user's emotional state by analyzing the word choices in their media posts. Using this information we create an easily digestible graph where we track the user's emotional state over time. Built with Blockstack for authorization, Node JS for the backend, and React for the front-end. Fetching data from the Twitter API and using the Watson Tone Analyzer to track users emotional state.

Boom [Boom Demonstration](#) || [Boom Github](#)

A javascript toy where a user can press any letter a-z and create an animation and sound that correlates with that letter. Prepare to create beats and kill time with Boom. Built with a Ruby on Rails backend to save users clips. Two libraries were used for the front-end Howler JS for the sound clips and Paper JS for the animations.

Experience

Center for Visual Communications / Production Manager

December 2017 - May 2018, Miami, FL
